## Ridgeback Max. 25 years experience - all in one top. Only from Storm Xcessories.

The Ridgeback MAX is the result of 25 years experience in supplying both large and small fleets and single-vehicle users alike. We have considered carefully how hardtops are used by fleets and their drivers, taken into account their requirements and incorporated them into a design that ensures maximum capacity, maximum security and an integral strength that is capable of taking the hardest work thrown at it.

Featuring the largest openings of any hardtop, the MAX allows users to kit the rear end of their Hilux the way they want it and unlike the majority of working hardtops out there, the MAX deflects water away from the operator when the doors are left in the open position. By hinging the doors on the roof, water is directed into channels and diverted away from the load area. No more water running down your neck as you reach in to grab your tools.

Our unique central locking system allows the driver to secure the cab whilst they continue to work out of the load area. The system works from a dedicated key fob which locks/unlocks all three doors simultaneously. As a backup there is a manual override in the event of a flat battery.

Each Max has an interior light and integral conduit to allow simple fitment of warning lights, work lights, reversing cameras and beacons. All hinges and fittings are manufactured in stainless steel to prevent corrosion and in the event of an accident, all parts are available from our extensive stock on a rapid delivery.

Our Fleet Sales team are able to advise on racking/shelving systems as well as other accessories to further enhance the MAX.

Integral Spoiler

Exclusive Styling

High Strength Doors

## Ridgeback MAX features

### Dedicated Central Locking

Each Max comes with a dedicated, stand-alone central locking system for maximum security and convenience. With a single press of the supplied key fob, the two side doors and the rear door can be locked/unlocked. All three doors are keyed the same in the event that a manual override is required. The wiring for the central locking system requires a feed from the vehicle's battery.

### Integrated Conduit

The MAX features integrated conduit which runs to the front and rear corners, the top centre of the left hand side door opening and the centre of the roof. This allows users and converters to install any number of electrical extras such as reversing cameras, beacons, light bars etc.. without having to worry about having to secure cables to the inside of the canopy.

### Door Drainage Channels

A common problem with the side and rear doors on commercial canopies is that when in the open position, the door channels water into the load area or down the neck of the driver. The Ridgeback MAX is hinged on the roof and features substantial drainage channels which divert water down the sides of the aperture and away from the working area.

### Stainless Steel Fittings

The hinges, gas strut brackets and lock brackets on the MAX are all fabricated in stainless steel. This ensures that they will last the lifetime of the hardtop and will not discolour or corrode. They are also significantly stronger than powder-coated mild steel fittings or the plastic fittings used on other brands.

### Clamp-On Installation

The MAX is installed using high strength aluminium clamps. This enables the MAX to be installed in extra quick time, a bonus for vehicle converters and installers. It also allows the MAX to be swapped easily to another vehicle in the event of an accident or breakdown. The MAX is also installed in base models without the need for the vehicle's integral ladder rack to be removed.

### Interior Light

The LED interior light fitted to the MAX illuminates the whole load area making loading and unloading in darkness a breeze. The light is powered by long lasting batteries (supplied), eliminating the risk of flattening the vehicle's battery when left switched on. Alternative interior lights can be easily installed if required using the integral conduit.

### Integral Spoiler

The Max features an integral spoiler on the rear door. As well as helping to keep road dirt off the rear door, it adds style and the perfect mounting point for rear reversing cameras.

### Smooth, Wipe-Down Interior

The interior of the MAX features a wipe-down, smooth interior ideal for applications where the truck is exposed to oils, dirt etc.

### Dimensions: Toyota Hilux Double Cab

Rear Door Aperture Height	Internal Height	Aperture Width	Overall Height	Side Door Opening Width	Side Door Opening Height
1000mm	1090mm	1240-980mm	1925mm	1020mm	500mm

## Storm Xccessories

The MAX is part of the outstanding range of Ridgeback canopies and tonneau covers.

Storm Xccessories are experienced suppliers of vehicle accessories to the OE, Fleet and Retail markets and have a widely recognised reputation for customer service and high quality products. We have offices and installation centres in England, Northern Ireland and the Republic of Ireland. We source only products that pass our rigorous standards of quality, durability and longevity. We are able to assist customers in finding the perfect accessories to maximise the usefulness and value of their vehicles. Please contact our sales team or your local installer to discuss your requirements.
